AUTOPSY REPORT

CASE 73 - 3357

August 13, 1973

PATHOLOGICAL DIAGNOSIS ON THE BODY

OF

Ruben Watson Haney
2317 Beall Street
Houston, Texas

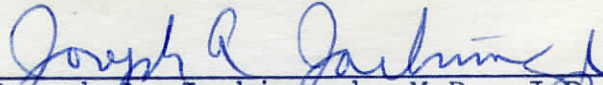

Asphyxia due to strangulation and
gagging.

OPINION

It is our opinion that the decedent,
Ruben Watson Haney, came to his death
as a result of asphyxia due to strangulation
and gagging, Homicide.

It is our further opinion that death
occurred on or about August 17, 1971.

COMMENT: Dr. Joseph A. Jachimczyk spoke
with Dorothy Haney on the telephone on
August 11, 1973.

Joseph A. Jachimczyk, M.D., J.D.
Chief Medical Examiner

(SEE COMPANION CASES 73-3332, 73-3333, 73-3334, 73-3335, 73-3336,
73-3337, 73-3338, 73-3339, 73-3347, 73-3348, 73-3349, 73-3350,
73-3353, 73-3354, 73-3355, 73-3356).

POSTMORTEM EXAMINATION ON THE BODY OF

Ruben Watson Haney
2317 Beall Street
Houston, Texas

HISTORY: The skeletal remains of this unidentified young male teenager (Unknown #17) were found at approximately 8:00 p.m. on August 9, 1973, in Stall #11 at 4500 Silver Bell Street, Houston, Texas. (See Companion Cases 73-3332, 73-3333, 73-3334, 73-3335, 73-3336, 73-3337, 73-3338, 73-3339, 73-3347, 73-3348, 73-3349, 73-3350, 73-3353, 73-3354, 73-3355, 73-3356).

AUTOPSY: The autopsy was performed by Chief Medical Examiner Joseph A. Jachimczyk, M.D., assisted by Assistant Medical Examiners G. Sheldon Green, M.D., and Ethel E. Erickson, M.D., and assisted by Dr. Paul G. Stimson, beginning at 1:00 p.m. on August 13, 1973, in the Harris County Morgue.

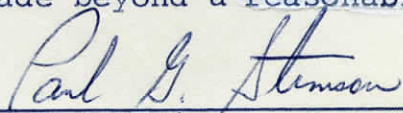

EXTERNAL APPEARANCE: These were the skeletal remains of a human body submitted in a plastic crash bag; the entire specimen weighing a total of 60 pounds. Within the bag, there were many decomposing bones and lime destroyed material and skull. There was a pair of "Farah slacks, never needs ironing". They were green plaid with delicate white and blue lines, forming squares. The length of the trouser legs was 28 inches from the crotch to the ankle. There were two green-yellow socks, measuring 11 inches from toe to heel. There was a pair of desert boots, measuring 11-1/2 inches in length from heel to toe. The boots reached above the ankle area, had a fairly large tongue, and rather long shoelaces. Looped around the neck area, there was a loop of tied sash cord, similar to that seen in the other bodies. There were strands of dark brown hair, measuring up to 9 inches in length. There was a portion of gag and adhesive tape covering the face area and a portion of fine rope ligature around the neck. The bones included the skull and mandible, two femurs in which the epiphyses were not fused. Each measured 17-1/2 inches in length. There were two humeri which measured 15 inches in length. The proximal epiphyses of the humeri had not been fused. The distals were fused. There also were two radii. They measured 10-1/4 inches in length, and two ulnas, measuring 9-1/2 inches in length. There were 24 ribs. There were two clavicles. There was an old healed fracture of the left clavicle with callous formation around it. The left radius was somewhat thickened at its distal end. This was compatible with an old healed fracture. There also were 15 vertebrae and two metatarsals.

DENTAL EXAMINATION

The charting was made according to the universal system as follows: upper right 1 to 16 and left lower 17 to 32. Dentition was somewhat unusual. The maxillary teeth present were numbers 2, 3, 6, 7, 10, 11, and 15. Left and right deciduous canines were present in the maxilla. Mandibular teeth present: numbers 18, 19, 22, 23, 26, 27, 30, and 31. Deciduous teeth present in the mandible were the right canine and first and second deciduous right molars. Caries were present: occlusal on 2 and 3 central and distal on the facial of the right maxillary deciduous central pit caries number 18 and 19 distal half of the tooth and in the mesial of the deciduous right mandibular cuspid and almost all of the crowns of the deciduous right mandibular first and second molars. Tooth #30 has caries on the distal two-thirds.

Comparison of the dental chart with Dr. W. L. George's chart, 1920 Ashland Street, Houston, Texas, of Ruben Watson Haney, revealed that caries were present in a similar pattern in teeth 3, number 6 deciduous, number 19, and number 30. The decedent was identified from a healed fractured left clavicle in the ante and postmortem radiographs.

In addition to the dental similarities, there was also a healed fractured left clavicle and left wrist which matched in both ante-mortem known radiographs and postmortem radiographs of these remains. Therefore, positive identification was made beyond a reasonable doubt.

Paul G. Stimson, D.D.S., M.S.

Autopsy

INVESTIGATOR'S REPORT

Investigator: L. C. Kelly

Dr. J. Helen Hicks (246 South
16, Chicago, Illinois) called for
you re: Ruben Watson - she
wanted his father's name to
mail \$15.00 to him because she went
to school at Hamilton in the night.
Also, she wanted to know if Mark
Scott was one of the mass murder
victims because she knew him +
heard that he was dead but not
investigated. She will call you
back.
